## Allowable Subject Matter

1. Claims 1, 3-11 and 13-28 are allowed.

2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 9, Yeh (US 6,822,610 B2) discloses a multi-band monopole antenna, comprising an antenna substrate; a feeding point; a first conductor for receiving networking signals in the frequency range of about 4.9 GHz to about 5.875 GHz, he first conductor comprising a polygonal portion having a polygonal shape with an aspect ratio of length to width of less than about 5 to about 1; and a second conductor for receiving networking signals in the frequency range of about 2.4 GHz to about 2.5 GHz, the second conductor adopting a linear, space-filling, or grid dimension shape. Yeh, however, fails to further teach that the first conductor further comprising a strip portion having a width smaller than a width of the polygonal portion, a first end of the strip portion is connected to the feeding point, and a second end of the strip portion is connected to the polygonal portion; wherein the polygonal portion comprises at least one notch where conducting material is removed from the polygonal portion for matching the impedance of the antenna; and the second conductor having a first end connected to the feeding portion.

Claims 3-8 and 21-23 are allowed for depending on claim 1.

Claims 10 and 24 are allowed for depending on claim 9.

Regarding claims 11 and 19, Wong et al (US 6,747,600) discloses a symmetrical multiband monopole antenna comprising an antenna substrate; a feeding point; first and second conductors for receiving networking signals in the frequency range of about 4.9 GHz

Art Unit: 2821

to about 5.875 GHz, each of the first and second conductors having symmetrical polygonal shapes with an aspect ratio of length to width of less than about 5 to about 1; third and fourth conductors for receiving networking signals in the frequency range of about 2.4 GHz to about 2.5 GHz, the third and fourth conductors adopting symmetrical linear, space-filling, or grid dimension shapes; and a feeding point for connecting the first, second, third and fourth conductors, wherein the first and second conductors are symmetrically oriented with respect to each other about a central axis on the antenna substrate and the third and fourth conductors are symmetrically oriented with respect to each other about the central axis on the antenna substrate. Wong, however, fails to further teach that each of the first and second conductors further comprising a strip portion having a width smaller than a width of the polygonal portion, a first end of the strip portion is connected to the feeding point, and a second end of the strip portion of each of the first and second conductors is connected to the feeding point; wherein the polygonal portion of each of the first and second conductors comprises at least one notch where conducting material is removed from the polygonal portion for matching the impedance of the antenna; and the third and fourth conductors having a first end connected to the feeding portion.

Claims 13-18 and 25-28 are allowed for depending on claim 11.

Claims 20 and 29 are allowed for depending on claim 19.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

- US 6,552,686 B2 discloses a multi-band antenna comprising first and second conductors having its first end connecting to a feed point.
- US 2004/0222922 A1 discloses a multi-band printed monopole antenna comprising first and second conductors having its first end connecting to a feed point.
